

06 Noise Analysis – Please confirm in writing that none of the special use equipment will produce disruptive noise:

- **Fleet Vehicle and Equipment Profile:** The mechanical footprint on-site is limited to standard, low-impact utility tractors, a lawnmower, and a traditional tractor-mounted tree spade. These pieces of equipment operate at standard agricultural decibel levels, identical to typical farming operations already prevalent throughout the surrounding F-2 and F-Farming districts.
- **Zero Heavy Processing Machinery:** No industrial grinders, concrete crushers, or commercial air compressors will be operated or stored on the property.
- **Operational Scheduling:** Fleet movement is restricted to a brief window during morning dispatch (approx. 7:00 AM) and afternoon return (approx. 4:30 PM). There will be no late-night loading, overnight mechanical operations, or weekend industrial processing, preserving the tranquil rural character and evening peace of the surrounding area.
