Good morning/afternoon: It should become clear by now, these "green energy" projects simply cost more green as in Ben Franklin's because they lead to higher costs and as we have seen recently, there are videos of windmills being raised via controlled explosions, and the 2B solar farm in California is being closed due to under performance and killing birds in part. All that money wasted as have so many other projects over the years..

You can put a modular nuke power plant on a 35 acre sight and produce 300MW of power which is what the 2000 acre site in DeKalb County will supposedly produce if predictions are correct, which they after are not.

I recently did an op ed for the [IllinoisReview.com](https://www.illinoisreview.com) website and I live in Elgin township near the Elgin CC.

Below is a connection to my article on Solar Farms.

Thank you, James P Economos DDS, [REDACTED]
