Good Morning,

The U.S. Army Corps of Engineers Chicago District has received your request. However it appears that there are no proposed aquatic resource impacts on the project site. If that is the case then no further coordination with our office is necessary. If you have determined that no permit is required for your project and would like to withdraw your request, please inform your **Project Manager**.

If you would still like to obtain a No Permit Required verification, we will proceed with our review. Please note that our priority is on efficient review of projects that require our approval. Therefore, our response time will vary depending upon our current workload of permit actions as well as weather conditions and site location (if a site visit is determined to be necessary).

File Number: LRC-2025-436

Project Manager: Aaron Spencer

If additional information is requested during the review of your submittal, please email all documents directly to the assigned **Project Manager**, along with any inquiries regarding the status of this request. Please reference your **File Number** in all future correspondence.

Please note our new website: <https://www.lrd.usace.army.mil/Wetlands-Permits/>

Streamline the permitting process with the **Regulatory Request System (RRS)** — your new online platform for permit applications.

rrs.usace.army.mil

The Regulatory Branch is committed to providing the highest level of Customer Service. We value your comments and would appreciate you contacting our management team if you have any comments/concerns regarding our customer service. You can reach the Branch Chief at Teralyn.R.Pompeii@usace.army.mil or the Assistant Branch Chief at Kathy.G.Chernich@usace.army.mil.

Subject: [Non-DoD Source] Electronic Application - NPR Request - Orchard Solar

Good Evening,

Please see the attached request for a "No Permit Required" letter for the above referenced site located in Sugar Grove, Kane County, Illinois. The proposed work on this property is the construction of three 5 MWac community solar facilities. The project will deliver electricity to the grid through three points of interconnection (POIs) with the local electric utility, ComEd. Clean Field Power has conducted significant environmental due diligence over the past six months which has informed the development plan. The project footprints will avoid all wetlands on-site and will incorporate stormwater management practices in compliance with the Kane County Stormwater Management Ordinance.

Please see the attached Request for a Letter of No Objection, delineation map identifying the aquatic resources on site, and the proposed site plan. Should additional documentation be needed, please provide a DoD SAFE file exchange link to upload these documents. Thank you for your consideration of this request.

Sincerely,

Aric Larson
