PROJECT NARRATIVE

(Supplement to NRI Application dated July 8, 2026, for 44W655 Welter Road, Maple Park, IL)

This project is for the proposed construction and operation of a new wireless communications facility. The current use of the property is farming and an equestrian club. The development area is 0.057 acres contained on a combined property of over 40 acres. The established farm and equestrian club will not be impacted or interfered with by this low intensity and unmanned project. The entire facility will be contained in the fenced 50' X 50' area. Once built, the facility will be visited approximately once a month by a technician that will use the existing driveway for most of the trip to the site compound.

The proposed facility is designed for a business to offer a global low-latency wireless network for satellite communication to their international customers to enhance wireless voice and data services, improve network capacity, and provide reliable emergency communication access (E-911) for the surrounding community.

We are committed to working closely with the community and the County to ensure this facility is designed and constructed in a manner that respects the surrounding area while meeting the critical connectivity needs of residents and businesses.

Sincerely,

Anthony M. Amine
